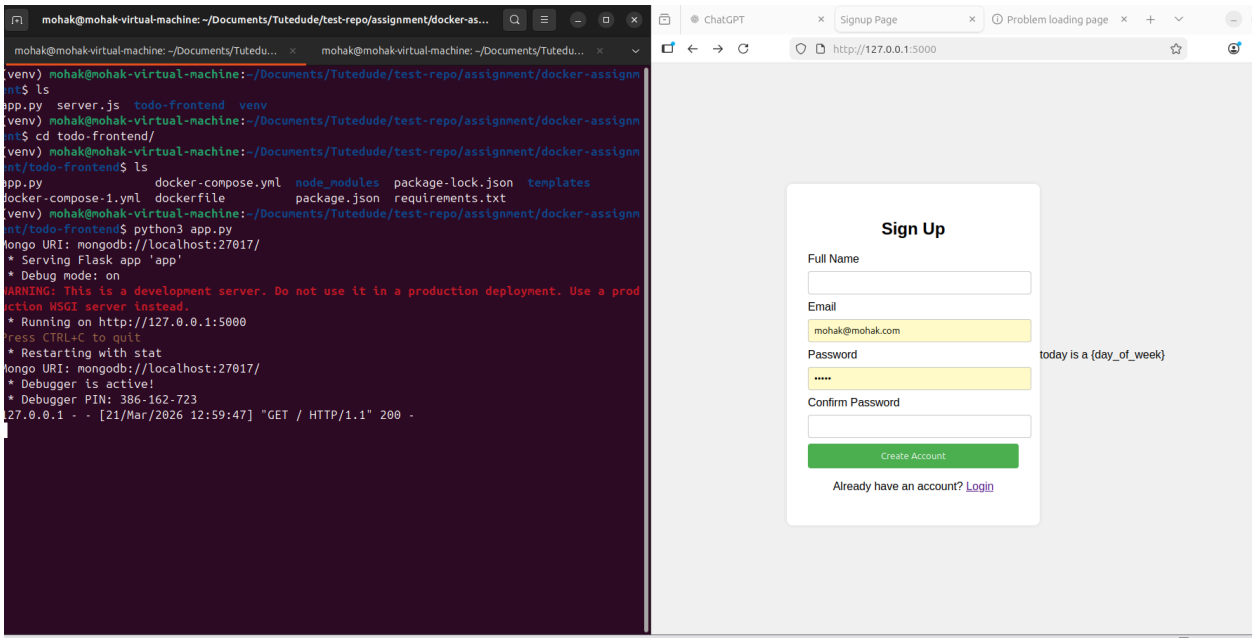
1. **Frontend (Node.js with Express)**:

- Create a frontend using Express and Node.js.
- Include a form similar to the one from the Flask Assignment 2.
- Configure the form to send a request to the Flask backend.
- **Backend (Flask)**:
- Use the Flask backend to handle the form submission and process the data.



- **Folder Structure**:
- Organize the project with separate folders for the frontend and backend.
- **Docker Configuration**:
- Create a `Dockerfile` for both the frontend and backend.

```
(venv) mohak@mohak-virtual-machine:~/Documents/Tutedude/test-repo/assignment/docke
ent$ ls
app.py  docker-compose.yml  dockerfile  server.js  todo-frontend  venv
(venv) mohak@mohak-virtual-machine:~/Documents/Tutedude/test-repo/assignment/docke
ent$ cat dockerfile
# Dockerfile for Flask backend
FROM python:3.12-slim

# Set working directory
WORKDIR /app

# Copy requirements and install
COPY requirements.txt .
RUN pip install --no-cache-dir -r requirements.txt

# Copy the rest of the app
COPY . .

# Expose Flask port
EXPOSE 5000

# Run Flask
CMD ["python", "app.py"]
```

- Write a `.yaml` file (Docker Compose) to connect both services in the same network.

```
ent$ cat docker-compose.yml
version: '3.8'

services:
  flask-app:
    build: .
    container_name: flask-app
    ports:
      - "5000:5000"   # Maps container port 5000 to host port 5000
    environment:
      # Use your MongoDB Atlas URI here
      - MONGO_URI=mongodb+srv://mohakkataria007_db_user:Password@ccluster0.lknf9iw.mongodb.
net/?retryWrites=true&w=majority
    volumes:
      - .:/app         # Mount current directory into container (for live edits)
    command: python3 app.py
(venv) mohak@mohak-virtual-machine:~/Documents/Tutedude/test-repo/assignment/docker-assignm
```

- Upload both images to docker hub and push your whole code to github and add the node_modules and other non required files(.vscode) in .gitignore
